DIGITAL SOLUTION THAT SIGNIFICANTLY HELPS DECISION MAKING PROCESS

Recent technology development is rapidly changing how business process is managed within industry. It leads to the end-to-end cost efficiency, impacting product competitiveness as well as margin of benefit to the business. Data and information from any business transaction is becoming a critical factor to enable effective decision making for anticipative actions within business operations (sales and manufacturing).

DIGITALIZATION of business transactions will provide a strong platforms to grow and creating agility for the business to win the competition. The digitalization will start from data acquisition process, building hierarchy of process to control flow of materialized cost, and displaying the key informations through performance dashboard to enable a much more effective decision making process.

Power Consumption Data Hierarchy Mapping

DIGINOVASI provides wide and flexible solution for an integrated and automated data processing system, gathering accurate data, serve and supervise, and provide real time control. The solution provides real time access and visibility for key informations in the business process, uncover losses in the business as well as opening huge opportunities.

We will help automating your data acquisition, data processing and performance reporting, identifying opportunities, setting up data management and distribution to all domains, integration with current systems and building your internal capability through training and coaching for your team.

The applications are designed to suit with widely used business application such as SAP. It is also designed for wide range of industrial operations such as supply chain process (delivery and distribution, demand planning and sales forecast, Inventory control, Business Warehouse), manufacturing process (energy loss, waste, including power monitoring system), and other customized design depends on business requirement.

The system captures sensor/measurement data, process the data into important information, visualize through performance dashboard, and dispatch it to cloud storage, make it accessible anytime anywhere via mobile device, ensuring quick and effective decisions and reponds.
